Royal Cyber Services

Royal Cyber helps organizations migrate from their existing infrastructure to IBM Business Process Manager Fast. With experienced IBM certified consultants, Royal Cyber has the expertise, skills and proven methodologies that help organizations achieve objectives, reduce time and get high return on investment.

Our offering includes:

• Assessment of your organizations applications and infrastructure
• Detailed execution plan that includes Implementation, testing, configuration and after support

Assessment
Royal Cyber consultants review your existing environment and assets to figure out data archival and other migration strategies. Our needs assessment analysis will help you identify opportunities for increased business operational productivity, fix and test pre-migration issues, run the upgrade readiness tool as well as identify risks involving upgrades and integration.

Planning
Planning is an essential part of BPM Migration. Our experts have wide experience with migration, we understand the entire lifecycle to build backup of existing assets and data and determine resources and hardware needs to plan project timelines.

Implementation & Deployment
Royal Cyber experts have hands-on experience in installation of BPM and will provide you with complete capacity & execution plan (Implementation, testing, configuration and after support) with better management of the implementation project, timely installation, lower startup and maintenance costs and quicker realization of return on investment.

Support
Royal Cyber is dedicated to backing your implementation with unparalleled support and service. Our Support Services Team provides telephone, fax, and web-based technical support, and is dedicated to working with you to provide advice and assistance.
